

# Notes to self

- . Exploring `FileDialog`
  - . The docs
  - . The API has changed from Qt5 to Qt 6
  - . You get the selected file by going through the `selectedFile` property.
  - . Use the doc and improvise.
- . Availability : A native platform file dialog is currently available on the following platforms:
  - . iOS
  - . Android
  - . Linux (when running with the GTK+ platform theme)
  - . macOS
  - . Windows
- . Mention filters

# FileDialog

# FileDialog

```
Column {
    Button{
        text : "Choose File"
        onClicked: {
            fileDialogId.open()
        }
    }
    Text {
        id : textId
        text : "Use hasn't chosen yet"
    }
    FileDialog{
        id : fileDialogId
        title: "Choose File"
        onAccepted: {
            textId.text = selectedFile
        }
        onRejected: {
            textId.text = "Dialog rejected"
        }
    }
}
```

# CMake

```
find_package(Qt6 6.2 COMPONENTS Quick QuickControls2 REQUIRED)
...
target_link_libraries(app2-Button
    PRIVATE Qt6::Quick Qt6::QuickControls2)
```
