

Notes to self

- . Exploring Frame
 - . Gives us a logical grouping of elements
 - . Doesn't give us any layout. You have to provide your own positioning.
- . Looks bad by default on Windows11, so we change the style to show different looks.

Frame

DelayButton

```
Frame {  
    anchors.centerIn: parent  
  
    ColumnLayout {  
        Button {  
            text: "Button1"  
        }  
        Button {  
            text: "Button2"  
        }  
        Button {  
            text: "Button3"  
        }  
    }  
}
```

CMake

```
find_package(Qt6 6.2 COMPONENTS Quick QuickControls2 REQUIRED)
...
target_link_libraries(app2-Button
    PRIVATE Qt6::Quick Qt6::QuickControls2)
```
