

Notes to self

- . Using header , highlight and footer with ListView
- . You just specify the respective rectangles.
- . One catch : the highlight shows up below the content by default here.
to make it show up on top, you increase its z index, which is what we do here.
- . Improvise based on the info you have here
- . Refer to the Qt5 course if necessary.

Header, Footer and Highlight

ListView

```
ListView {  
    id : mListViewById  
    anchors.fill: parent  
    header: headerId  
    footer : Rectangle{  
        width: parent.width  
        height: 50  
        color: "dodgerblue"  
    }  
    highlight: Rectangle{  
        width: parent.width  
        color: "blue"  
        radius: 14  
        border.color: "yellowgreen"  
        z : 3  
        opacity: 0.1  
    }  
  
    model : ["January", "February", "March", "April", "May", "June", "July", "Aug", "Sept", "Oct", "Nov", "Dec"]  
    delegate: delegateId  
}
```

Header Component

```
Component {  
    id : headerId  
    Rectangle {  
        id : headerRectId  
        width: parent.width  
        height: 50  
        color: "yellowgreen"  
        border {color: "#9EDDF2"; width: 2}  
        Text {  
            anchors.centerIn: parent  
            text : "Months"  
            font.pointSize: 20  
        }  
    }  
}
```

CMake

```
find_package(Qt6 6.2 COMPONENTS Quick QuickControls2 REQUIRED)
...
target_link_libraries(app2-Button
    PRIVATE Qt6::Quick Qt6::QuickControls2)
```
