

Notes to self

- . Showing some custom dialogs you can use even on mobile
- . Start by running the gallery example and show the dialogs
 - . just like in the Qt 5 course
- . From there, create a project and steal the code for the custom dialogs and learn from them
- . Change the `contentHeight` property in the `Button` for content to not cause binding loops by making it depend on the parent height.
- . The goal here is to help students steal things from Qt examples.
- . Use the info above as a base and improvise.

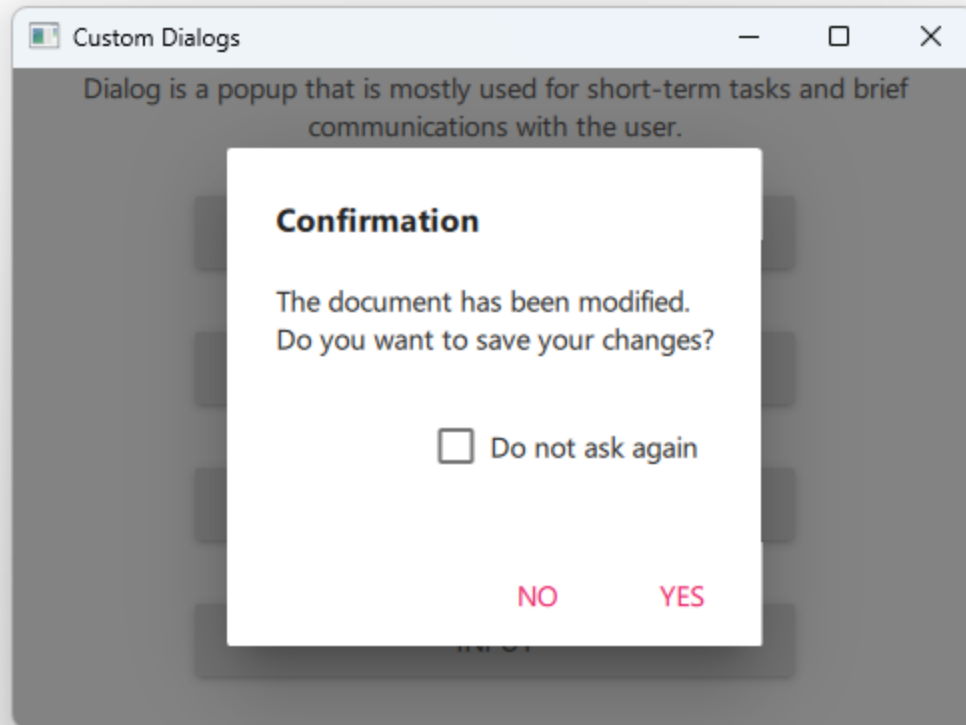

Custom Dialogs

Using the Qt Examples

- There are tons of examples from the Qt project you can learn from
- We'll learn from the Gallery example and build all these cool dialogs

CMake

```
find_package(Qt6 6.2 COMPONENTS Quick QuickControls2 REQUIRED)
...
target_link_libraries(app2-Button
    PRIVATE Qt6::Quick Qt6::QuickControls2)
```
