Notes to self
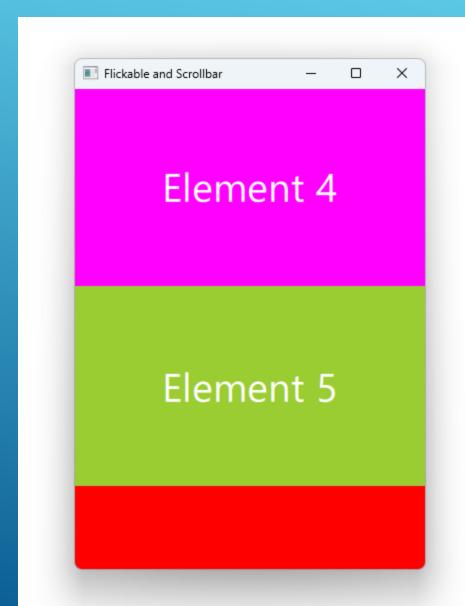

```
. Exploring Flickable and ScrollBar
. Allows visualize content that is bigger than the available
   screen space.
. Content can be dragged and moved around.
. This element forms the basis of Items that are designed to
   show large numbers of child items, such as ListView and GridView
. Gives the ability to also set up scrollbars if you need them.
. Use the docs and improvise for the rest.
```

Flickable and ScrollBar

Flickable and ScrollBar

```qml
Flickable{
    Column{
        id : mColumnId
        Rectangle {
            Text {
                text: "Element 1"
            }
        }
        Rectangle {}
        Rectangle {}
        Rectangle {}
        //...
    }
    ScrollBar.vertical: ScrollBar{}
}
```

CMake

```
find_package(Qt6 6.2 COMPONENTS Quick QuickControls2 REQUIRED)
...
target_link_libraries(app2-Button
    PRIVATE Qt6::Quick Qt6::QuickControls2)
```
