# Notes to self

```
. Importing js files : https://doc.qt.io/qt-5/qtqml-javascript-imports.html
. You add them as QML files in the CMake file
. This lecture : Import js into QML
    . The syntax :
        . import "utilities1.js" as Utilities1
. What if we want to import JS from another js file? That's indirect import.
    We cover that in the next lecture.
```

JS Direct Import

utilities1.js

```javascript
function greeting()
{
    console.log("Hello there from external JS file utilities1.js")
}
```

main.qml

```qml
import "utilities1.js" as Utilities1
Window {
    visible: true
    width: 640
    height: 480
    title: qsTr("Javascript Direct Import")

    Rectangle {
        color: "yellowgreen"
        MouseArea {
            anchors.fill: parent
            onClicked: {
                Utilities1.greeting()
            }
        }
    }
}
```
